PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience in full-stack software development, backend technologies, REST APIs and database-driven applications. Experienced in developing and deploying web applications using FastAPI, PostgreSQL and modern frontend technologies. Seeking a Software Engineer role to apply technical skills, solve practical problems and contribute to reliable software products.

EDUCATION

Bachelor of Technology (Computer Science & Engineering), Amity University 2023 – 2027
Current CGPA: 7.91 (7th Semester) *Currently Pursuing*
Senior Secondary (12th) | Secondary (10th)

SKILLS

Programming Languages	Python (Core), JavaScript (ES6+), C++, Java
Backend Frameworks	FastAPI, Pydantic, Node.js
Web Technologies	HTML5, CSS3, Bootstrap, React.js, Angular
Tools & Platforms	GitHub, Git, VS Code, Uvicorn, Postman, Render
Databases	PostgreSQL, MySQL, SQLite
Core Concepts	RESTful APIs, SDLC, OOPs, MVC, Authentication, Authorization, RBAC

INTERNSHIP EXPERIENCE

Full Stack Development Intern Apr 2026 – May 2026
Thiranex Technologies

- Developed responsive web application components using HTML, CSS, JavaScript and backend technologies.
- Worked with REST API integration, database operations and debugging of application features.
- Tested application functionality and identified issues during development to improve reliability and usability.
- Collaborated with mentors to understand the software development lifecycle, debugging practices and real-world development workflows.

PROJECTS

FlowOps – Secure Approval Workspace **Live Demo** | **GitHub**
React, TypeScript, FastAPI, PostgreSQL, Redis, Celery, SQLAlchemy

- Built a role-based company approval platform for equipment, software, cloud budgets, expenses, leave, access and vendor-related requests with multi-step approval workflows.
- Developed a FastAPI and SQLAlchemy backend with PostgreSQL, implementing role-based authorization, manager assignments, workflow routing and object-level access control.
- Implemented JWT-based sessions, Argon2id password hashing, audit events, private file handling, notifications and prevention of unauthorized or self-approval actions.
- Integrated Redis rate limiting and Celery background jobs for reminders and escalation tasks, and deployed the application on Render as a working production-style web application.

Postmark – Multi-User URL Shortener SaaS **Live Demo** | **GitHub**
Python, FastAPI, PostgreSQL, SQLAlchemy, JWT

- Built a multi-user URL shortening platform with JWT-based authentication and bcrypt password hashing for secure account management.
- Designed relational database models for Users, Links and Clicks using SQLAlchemy ORM and PostgreSQL with ownership-based access control.
- Implemented shortened-link redirection and click analytics with timestamp and device tracking for monitoring link activity.
- Deployed the complete application on Render with persistent database storage and a working frontend-to-backend production flow.

STRENGTHS

Quick learner with a strong problem-solving mindset, good adaptability, and a practical approach to learning new technologies.
